

# The **complete package** with *Septoria* protection built in!

## KWS EXTASE

Group 2 Winter Wheat  
Boisseau x Solheio

- Second highest untreated yield on the RL
- The most complete package in terms of disease resistance and quality on the market today
- Exceptional resistance to *Septoria tritici* - the first variety over an 8 on the market

After 5 years at the top of the untreated tree, KWS Extase has now been bumped into second by its prodigy KWS Equipe. Its amazing combination of end-market potential, yield and disease resistance will make it a variety that every farmer will still want to grow in 2024 and beyond. The highest yielding breadmaking variety on the RL, KWS Extase is suited to a wide range of soil types and its regional performance is strong across the board.

It boasts the second highest untreated yield on the RL at 91% controls; the robust all-round package

that KWS Extase offers is completed with an exceptional score of 7 for *Septoria tritici*. As a Group 2 milling wheat with excellent grain characteristics, KWS Extase meets the needs of domestic millers and is approved for export with its status.

As a French-bred variety, its speed of movement through stem extension is faster than average; growers will want to prioritise it in the spring to ensure that input applications are made to suit the needs of the variety rather than being calendar-driven. Best results are achieved sowing later.

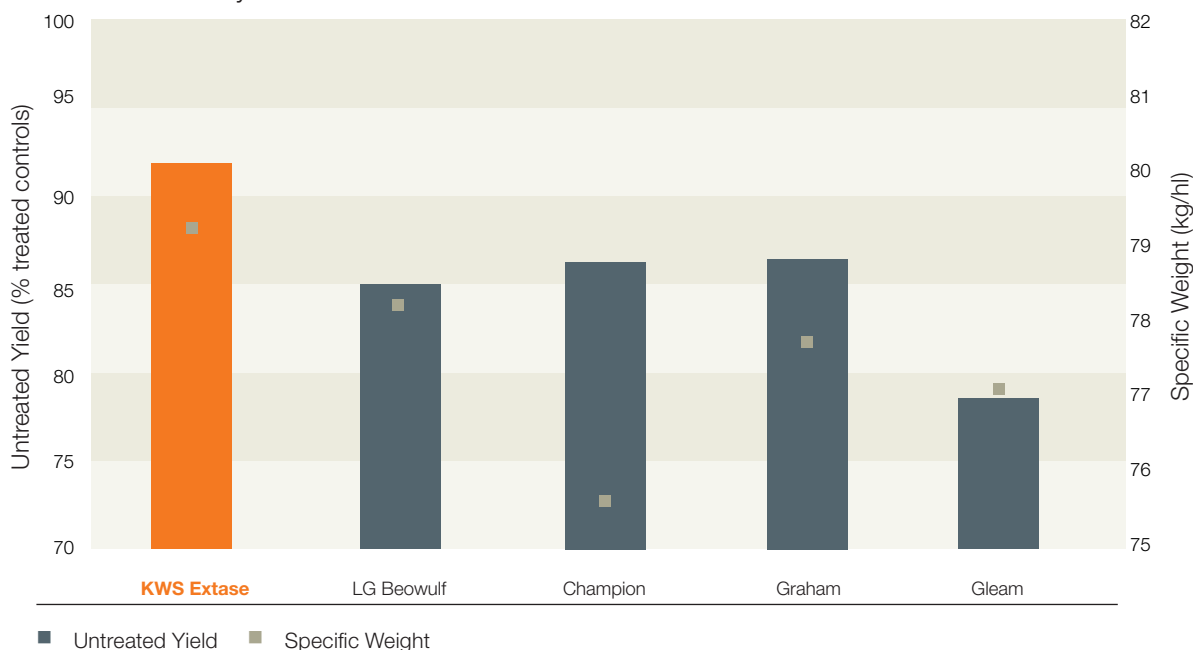

RECOMMENDED

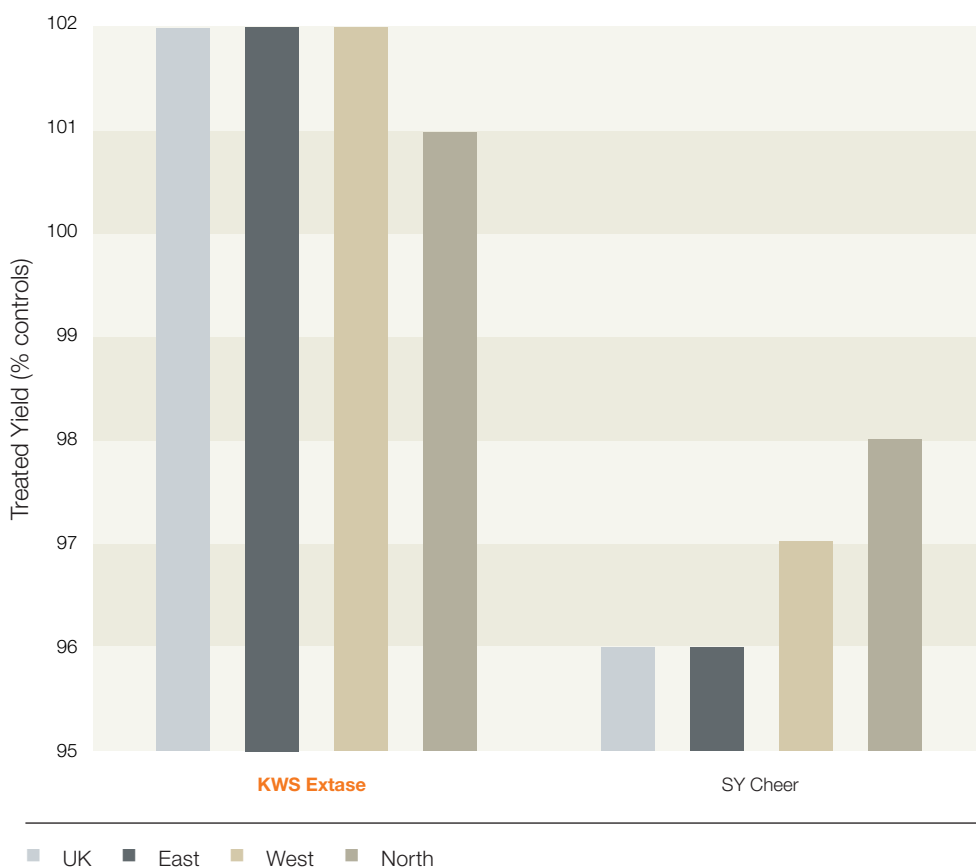

# What makes KWS EXTASE the wheat variety for you?

KWS Extase has the best combination of disease resistance and physical grain characteristics on the market today.

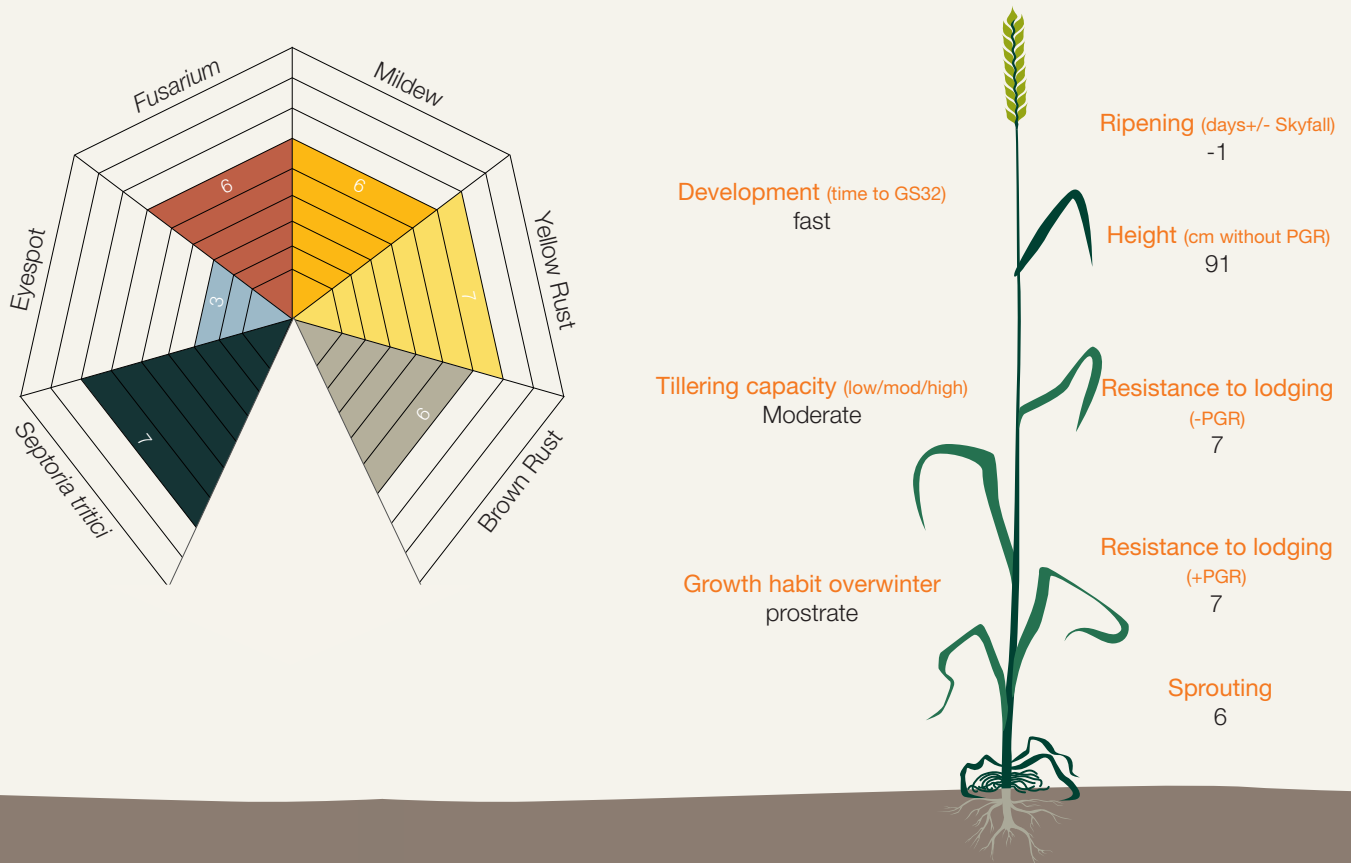

## KWS EXTASE yield performance

Yield	% treated controls

# KWS EXTASE - Sowing for Peak Performance

**80% of your crop's potential is locked in by the seed you buy and sow.** While you can fine tune this with the correct nitrogen levels, using fungicides wisely to protect it from disease and paying attention to basic management principles, many attributes of your crop can't be changed. Therefore, it pays for you and your agronomist to make proactive choices before ordering a variety.

**To get peak performance from KWS Extase we recommend drilling in the following time window:**

At KWS, we believe to get the best performance on your farm it is critical that when you choose your variety, you are using a wealth of data to tailor your choice for both your farm and individual field situation.
