Group 4 Feed Wheat – Hard

Group 4 Feed
Wheat – Hard

High Resistance
to Yellow Rust

High Resistance
to Septoria tritici

Orange Wheat
Blossom Midge

Status: AHDB Recommended List 2025/26

CHAMPION is the ultimate barn buster, previously topping the Candidate List in 2021/22 and topping the 2022/23 Recommended List with the highest yield available overall. CHAMPION is a high yielding feed wheat (Group 4) (106%) and is also one of the highest yielding wheats on the list when grown as either first or second cereal and also joint top on heavy soils.

CHAMPION is the top variety drilled on heavy soils and second on light soils which shows its versatility and suitability to a wide range of sites. It has a medium length straw, with limited lodging seen over five years of trials in the UK. In common with most other varieties it may require a PGR.

CHAMPION boasts some of the best scores for yellow rust and Septoria on the RL and also offers growers orange wheat blossom midge resistance. With outstanding overall yield performance – CHAMPION has a robust package for agronomics, disease resistance and grain quality. It is one of the few varieties which has overcome the 'yield/resistance' trade-off.

CHAMPION has proven itself to be a successful late drilled variety with the one of the highest scores on the list when planted in a late drilled situation.

Due to CHAMPION's powerful growth habit, being five days faster than average in the late sown period (Nov), the breeder doesn't recommend drilling in the early September drilling spot. The latest safe sowing date for CHAMPION is mid-February.

CHAMPION is able to fulfill the high volume feed market requirements successfully.

THE HIGHEST YIELDING WHEAT IN THE WORLD*

* The highest wheat yield is 17.95 tonnes/ha (39572.97 lb /ha) and was harvested from 8.2920 ha (20.49 acres) by Tim Lamyman (UK) in Lout Lincolnshire, UK, on 10 August 2022. Data from Guinness World Records.
